Non-Meter Power Management Applications

PLUG2022

Presented by: Juan Arias

PLUG: PowerLogic Users Group

PowerLogic

Connected power devices to improve quality, reliability, security, safety, asset life and energy efficiency

PowerLogic ION

PowerLogic PM

PowerLogic PFC

PowerLogic Easergy Relays

PowerLogic AccuSine

EcoStruxure™ Power

The industrial IoT Platform for Power Management

EcoStruxure™ Power Architecture

Flexible

to address the key challenges from safety, reliability, sustainability and cybersecurity

Scalable

from small facilities to the largest electro-intensive facilities

Open

to 3rd party devices and to integration with other operational systems

Life Is On

Electrical safety

Safety is the top concern for all organizations. EcoStruxure Power enables augmented visibility into the conditions of the electrical distribution to help facility teams protect staff and occupants from electrical fires, shocks, and arc flashes.

Power availability

Business continuity and performance are the livelihoods of companies in the digital age. Power is essential to ensuring always-on operations and processes. EcoStruxure Power enhances operations staff to avoid downtime and improve the reliability of the electrical system.

Efficiency

Energy and labor represent the largest variable cost for most organizations. In addition, the trend towards greener facilities is an expectation instead of a niche. EcoStruxure Power helps improve energy performance, operational efficiency, and sustainability of facilities.

PowerLogic P5 and Easergy P3

Take electrical safety and protection to the next level

Unique Modularity

Evolutive design, plug-in design, built-in injection, reduced engineering

Smart and Secure

Multi-protocol, programmability and Cybersecurity compliance (IEC62443, Achilles),

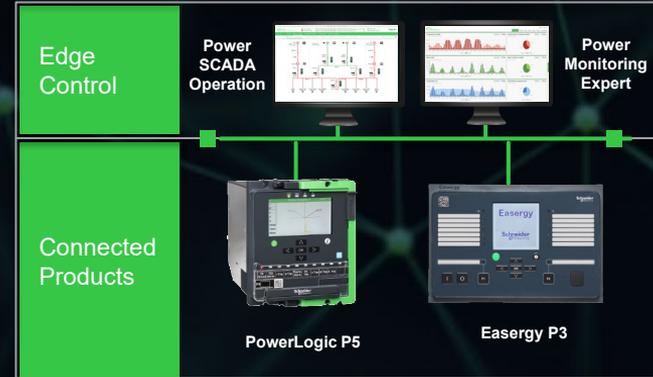

Reliable & better maintainability

<10 min MTTR, extended operation profile,

Enhanced Safety

Embedded arc-flash protection, safer design, nearby control

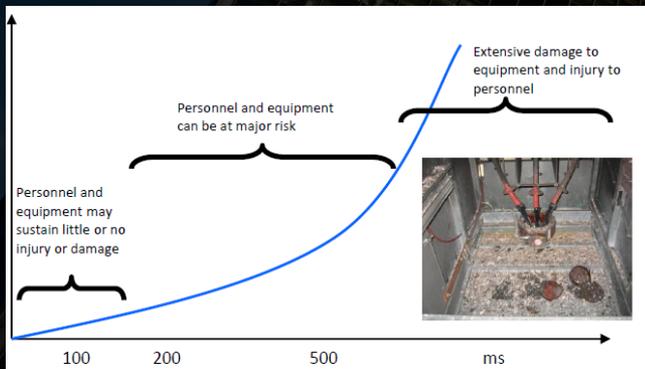

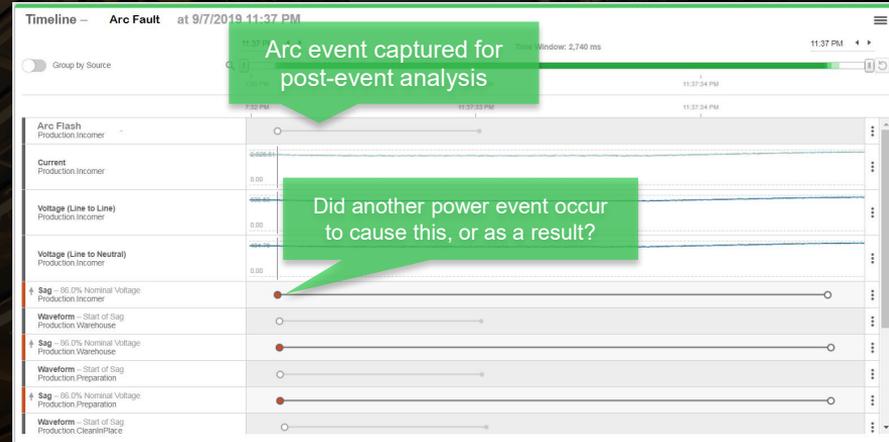

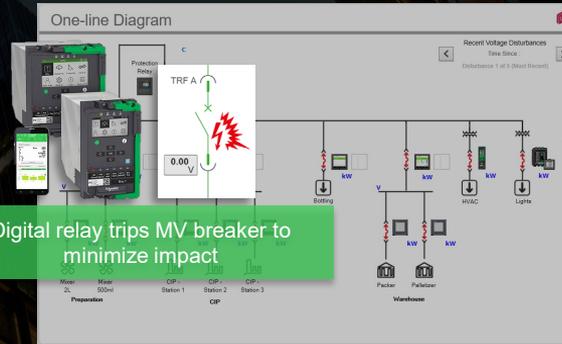

Arc Flash Protection

Help Protect Staff and Occupants

Operations notified of event

- Minimize the costs resulting from arc flash damages: downtime, repair time, interruption of processes and equipment
- Reduce or avoid personal injury due to arc flash events
- Improve safety during maintenance activities
- Get real-time visibility for fast response following arc flash events
- Improve arc flash awareness for maintenance teams: remote monitoring, alarming and notification
- Provide post arc flash event analysis

According to NFPA, 5-10 Arc Flash incidents occur every day in the USA

PowerLogic PFC Capacitor Banks

Smart Power Factor Correction

Green

Reduce carbon footprint and achieve sustainability goals

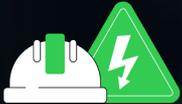

Smart

Self-monitoring to optimize maintenance and avoid downtime

Reliable

Best-in-class SE components for superior performance & life span

Safe

Uncompromised safety with best-in-class design

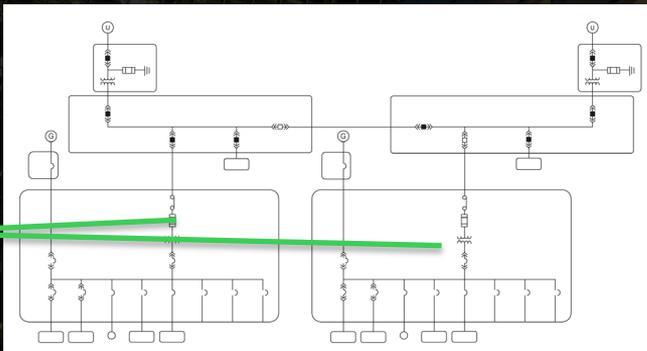

Power Factor Correction

Reduce Energy Usage, Co2 and Costs

- Many utilities penalize lagging Power Factor or reactive power consumption – Simple ROI story to start an energy cost management discussion.
- Leverage power metering on inductive loads and system monitoring software to measure leading and lagging power factor.
- Correct power factor with capacitor banks or individual capacitors installed in gear to avoid paying penalties.
- Simple calculable energy savings with fast payback.
- Simple diagnostics and alarming to help ensure proper capacitor operation and facilitate maintenance

Report Summary
Report Run Date: 21-November-2018

Demo
201 South Park Dr
Lafayette, TN 37086

100% System Affected
The number indicates the percentage of total equipment affected by the reported issue.

Report Details
Date Range: 1 May 2018 - 1 A

Potential Issue: Excessive Current Harmonic Distortion Condition
Current harmonic distortion has been detected at a level that may affect motor and/or sensitive equipment operation.
Source: Unknown
System Load Affected: 100.00 %

Potential Issue: Excessive Voltage Harmonic Distortion Condition
Voltage harmonic distortion has been detected at a level that may affect motor and/or sensitive equipment operation.
Source: Unknown
System Load Affected: 100.00 %

Potential Issue: Excessive Lagging Power Factor
Based on typical utility priority thresholds, lagging Power Factor was detected at the time of peak demand.
Source: Unknown
System Load Affected: 20.36 %

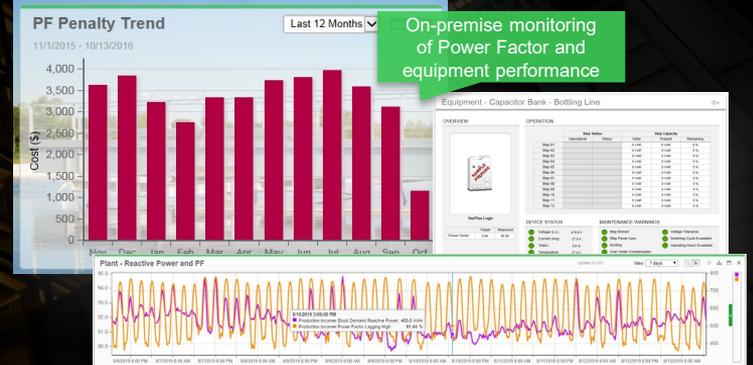

Potential Issue: Excessive Voltage Harmonic Distortion Condition
Voltage harmonic distortion has been detected at a level that may affect motor and/or sensitive equipment operation.
Source: Unknown
System Load Affected: 100.00 %

Potential Issue: Inactive Data Range
Device reported data outside of target range. Consider to perform further analysis.
Source: Unknown
System Load Affected: 0.00 %

Potential Issue: No Voltage Data in Query Period
No Voltage Data in Query Period
Source: Unknown
System Load Affected: 11.02 %

Power Quality
Correction

PowerLogic AccuSine (PCS+, PFV+, PCSn)

Active Compensation with Smart Power Electronics

Efficient and scalable

Multi-function, modular design and scalable to a changing network

Smart

Optimal setpoint tracking, seamless SW integration, remote troubleshooting

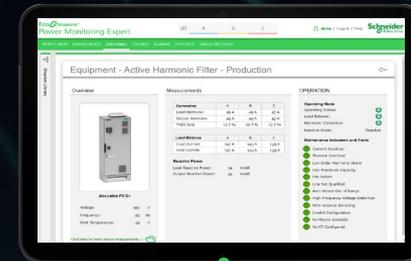

Reliable

Paralleling and redundancy. Multi-master architecture. Advanced thermal design

Compliant

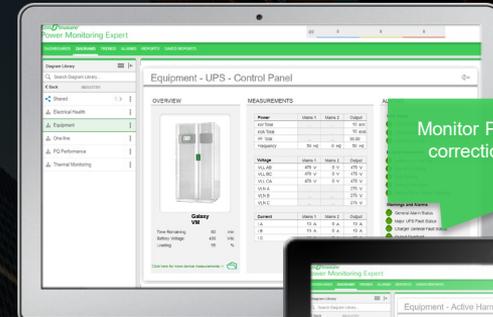

Keep electrical parameters within prescribed limits ensuring a healthy grid

Power Quality Correction

Avoid unplanned downtime from electrical failure

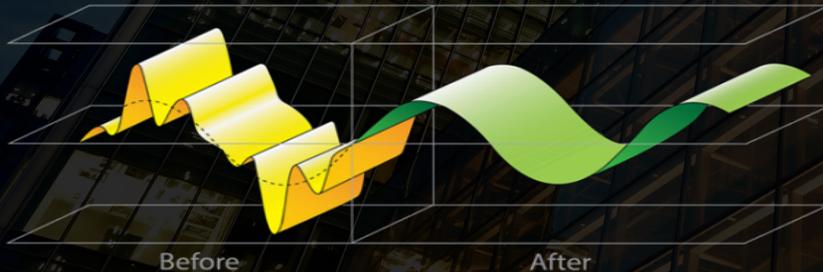

- Help adhere with power quality compliance standards
- Helps ensure energy efficiency by optimizing transformer and cable capacities; reduces utility power factor penalties; and saves the cost of generation and transmission of reactive and harmonic current (non active currents)
- Correct abnormal voltage conditions such as over/under voltages, harmonics (THDi, THDu) and more that affect critical equipment like transformers, drives and PLCs.
- Protect sensitive equipment from brief interruptions with UPS systems.
